Objective

Dedicated, creative and well-detailed frontend developer with a passion for building responsive and user-focused digital experiences. Seeking a role where I can leverage my skills in JavaScript, React, and development to deliver, craft intuitive and solve user client side problem with modern, impactful, and high-performance software.

Experience

- Geegstack — Frontend Developer (2022 – Present)

• Built mobile-first, responsive websites using HTML, CSS, and JavaScript, ensuring seamless user experiences across devices.

• Developed interactive user interfaces using React.js with a focus on easy accessibility and performance.

• Integrated RESTful APIs to manage complex state and asynchronous data flows.

• Used Git and GitHub for version control, issue tracking, and code collaboration and sharing.

• Collaborated with designers, backend developers, and product managers to create polished, user-centered applications.

Projects

Project Name – Oyin's

A responsive website for a food restaurant that helps users order healthier food choices from the owner of the restaurant. The website is well detailed, having a navigation including a reservation, the treat has all the necessary meal anyone will like. Built using HTML, CSS,

and JavaScript. Major features include meal type, client reviews, personalized recommendations, and responsive design for mobile and desktop users.
